Projects

Disease Checker / Python

February 2025

- Developed an AI-powered tool for early disease detection using medical image analysis
- Built deep learning models with TensorFlow for high-accuracy diagnostics
- Designed a Streamlit-based interface for real-time predictions
- Implemented data preprocessing and augmentation for improved accuracy.

Email Spam Checker/ Python

January 2025

- Developed a machine learning-based email spam detection system
- Trained a classification model using NLP techniques to filter spam emails
- Implemented a user-friendly interface for real-time email classification
- Optimized model accuracy with feature engineering and data preprocessing.
- Ensured efficient text vectorization using TF-IDF for better spam detection.

Tableau based Dashboard / Tableau Prep, Tableau Desktop

May 2024

- Developed a Netflix dashboard in Tableau, analyzing viewership trends and audience segmentation.
- Utilized data connection and preparation techniques to ensure seamless data integration
- Created interactive visualizations for genre analysis and audience insights using Tableau
- Applied data blending and joins to combine multiple data sources for comprehensive analysis
